Application for Internship – Quality Management Technology Cluster Driving

Dear Hiring Team,

I am applying for the Internship in Quality Management – Technology Cluster Driving at BMW Group, as the role strongly aligns with my background in automotive quality engineering and AI-supported data analysis. I am currently pursuing a Master's degree in Mechatronic and Cyber-Physical Systems at Technische Hochschule Deggendorf, where I have achieved a cumulative grade of 1.2 in my first semester. My studies focus on systems engineering, data analysis, and intelligent automation, and I am particularly interested in how AI-supported methods can enhance quality management in complex automotive systems.

Previously, I worked as a Quality Assurance Engineer at Tata Motors on the Body-in-White (BIW) line for the Punch Electric Vehicle project. In this role, I applied quality tools such as FMEA and Ishikawa analysis to investigate assembly issues. By identifying the root cause and implementing a Poka-Yoke solution, I reduced an error occurrence from 5 PPH to 0 PPH. I also collaborated closely with cross-functional teams and contributed to the preparation and updating of quality documentation, including FMEAs. This experience strengthened my understanding of structured risk analysis and sparked my interest in predictive and data-driven quality methods.

During my Master's studies, courses such as Cyber-Physical Systems deepened my understanding of systems engineering and failure analysis. Recently, I implemented a Random Forest machine learning model in Python to predict welding faults using historical process data. The model achieved 96.8% accuracy and identified voltage and current variability as key factors influencing weld quality. This project further strengthened my interest in combining AI with quality engineering and closely aligns with the focus of this internship on AI applications, quality data analysis, and technical risk management.

I bring an analytical mindset, hands-on experience with quality tools, and a structured approach to problem-solving. The opportunity to support the analysis of quality data, contribute to FMEA development, and explore AI-driven quality applications within BMW's driving technology cluster is particularly motivating for me. I communicate fluently in English and am currently improving my German (B1 level).

I would welcome the opportunity to contribute to BMW's quality management activities while gaining practical insight into data-driven quality processes across the product life cycle.

Thank you for your time and consideration.

Yours sincerely,
Sai Pranav Adabala
